

CRM Lite — Main Features & Capabilities

A concise, bullet-pointed summary of all primary features, AI services, and workflows.

1. LEAD MANAGEMENT & 360° TRACKING

- **Full Lead Lifecycle Tracking:** Captures prospect contact details, organization, job title, industry, deal value, win probability percentage, and assigned representative.
- **Multi-Channel Sourcing:** Tracks origin channels (Website, LinkedIn, Referrals, Cold Outreach, Trade Shows, Webinars) to identify high-converting lead channels.
- **Priority & Qualification Scoring:** Assigns automated priority tiers (Low, Medium, High, Urgent) and a 0–100 score to guide sales rep focus toward the highest-value opportunities.
- **Duplicate Lead Warning:** Monitors incoming prospects against existing email addresses and phone numbers to prevent duplicate records and territory conflicts.
- **Multi-Type Interaction Notes:** Logs client communications categorized as Call, WhatsApp, Email, Meeting, Demo, Objection, or General notes.
- **Chronological Activity Timeline:** Maintains an immutable, time-stamped audit trail of every status change, note added, assignment, and scheduled follow-up.
- **Atomic Customer Conversion:** Converts qualified won leads into official Customer accounts inside a database transaction (transaction.atomic()), retaining all original notes and call logs.
- **Mandatory Loss Reason Attribution:** Prompts for a structured root cause (Budget, Competitor, Feature Gap, Timing, No Response) when a deal is lost to inform win/loss analysis.
- **Search, Multi-Filter & CSV Export:** Offers instant keyword search, stage/rep/priority filtering, and streaming CSV downloads of filtered lead records.

2. VISUAL SALES PIPELINE (KANBAN BOARD)

- **7-Stage Sales Lifecycle Funnel:** Visualizes deals across seven standardized stages: **New, Contacted, Demo Scheduled, Negotiation, Qualified, Won, and Lost.**
- **Interactive Kanban Board:** Renders responsive deal cards with drag-and-drop movement or one-click stage progression buttons.
- **Real-Time Column Value & Deal Totals:** Dynamically sums the total deal count and aggregated monetary value for each stage column without page reloads.
- **Multi-Parameter Pipeline Filtering:** Instantly filters the entire pipeline by assigned sales representative, priority level, date range, or prospect search.
- **Automated Stage Change Triggers:** Automatically dispatches in-app notifications and branded email alerts when a lead progresses to another stage.

3. SMART FOLLOW-UP ENGINE & TASK SCHEDULER

- **Precision Follow-Up Scheduler:** Allows scheduling follow-up calls, emails, or meetings with exact dates, times, priority levels, and reminder notes.
- **Anti-Past Date Validation:** Enforces strict backend and frontend validation preventing tasks from ever being scheduled in the past.
- **Automated Overdue Detection:** Automatically detects and flags overdue tasks with prominent warning badges and increments executive dashboard alert counts.
- **'Due Today' Action Hub:** Provides sales representatives with a focused morning queue of tasks requiring attention on the current day.
- **Mandatory Outcome Logging:** Requires reps to document interaction outcomes (notes and results) before marking a follow-up task as complete.

4. INTERACTIVE SALES CALENDAR HUB

- **Month, Week & Day Calendar Views:** Provides comprehensive scheduling layouts to visualize appointments, follow-ups, and customer demos.
- **Color-Coded Event Cards:** Visually distinguishes calls (Teal), meetings (Blue), demos (Purple), and urgent tasks (Red).
- **Direct In-Calendar Booking:** Clicking any open calendar slot opens a scheduling modal with pre-filled date and time.
- **1-Click Record Navigation:** Clicking any calendar event navigates directly to the associated lead or customer profile.

5. CONVERTED CUSTOMER MANAGEMENT

- **Dedicated Customer Directory:** Maintains an active directory of paying customer accounts separate from active sales pipeline leads.
- **360° Customer Profile & Origin Lineage:** Links customer profiles directly back to the original lead record, preserving original source, conversion date, and rep.
- **Lifetime Value (LTV) Tracking:** Tracks closed deal amounts, active contract values, and renewal milestones for customer success teams.
- **Full Interaction Archive Preservation:** Seamlessly preserves and displays all pre-conversion phone recordings, notes, and emails within the customer profile.

6. ARTIFICIAL INTELLIGENCE (AI) SUITE (POWERED BY GEMINI 2.5 FLASH)

- **Multimodal Speech-to-Text Call Transcription:** Transcribes sales call audio directly from browser recordings or uploaded files (.mp3, .wav, .m4a, .webm, .ogg up to 25MB) using native multimodal Gemini audio understanding.
- **Automated Call Deal Intelligence:** Automatically extracts executive summaries, customer intent, key objections, sentiment, stage recommendations, and action items in structured JSON.
- **1-Click Call Sync to CRM:** Appends call summaries and action items directly to the lead timeline and updates deal stage with a single click.
- **Conversational CRM AI Copilot:** Slide-out assistant drawer grounded in live CRM database records (leads, pipeline values, overdue tasks) for natural language querying.
- **Safe Action Confirmation Protocol:** Allows the Copilot to draft actions (create lead, schedule follow-up, update stage) with interactive UI cards requiring human confirmation before database execution.
- **Lead Dossier AI Synthesis:** Generates on-demand executive briefings summarizing a prospect's entire communication history with prescriptive stage-progression recommendations.
- **Dynamic Environment Key Reloading:** Automatically detects updated Gemini API keys in backend/.env on the fly without requiring server restarts.
- **Central AI Operations Center & Settings:** Dedicated page to monitor AI provider connectivity, inspect token usage, and adjust model temperature sliders.

7. TEAM COLLABORATION & INTERNAL MENTIONS

- **Private Internal Team Notes:** Enables sales reps and managers to post internal deal notes and handoff comments that remain completely hidden from external clients.
- **Team Member @Mentions Autocomplete:** Typing '@' in any internal comment brings up an interactive dropdown of active sales colleagues for instant tagging.
- **Instant Mention Notifications:** Automatically dispatches an in-app alert to the tagged team member linking directly to the specific conversation thread.

8. NOTIFICATION & REAL-TIME ALERT ENGINE

- **In-App Notification Bell & Live Badge:** Header notification bell with an unread badge counter, priority indicators (Low, Normal, High, Urgent), and one-click navigation to the target record.
- **Automated Transactional HTML Emails:** Dispatches responsive HTML emails with stage comparison pills and direct action links (e.g. `lead_stage_updated.html`).
- **Anti-Self-Notification Filtering:** Intelligently suppresses notification alerts when a user performs the action themselves, eliminating alert fatigue.
- **SMTP Diagnostic CLI Tool:** Includes a pre-built verification utility (`python backend/check_email.py`) to test live email delivery and Google App Password connectivity.

9. REAL-TIME KPI DASHBOARDS & ANALYTICS

- **Zero-Hardcoded Executive Dashboard:** Dynamically aggregates live metrics: Total Active Leads, Converted Customers, Overall Win Rate %, Total Pipeline Value, and Overdue Tasks.
- **Visual Pipeline Funnel & Stage Distribution:** Displays real-time deal distribution charts and monthly lead acquisition trends.
- **Sales Representative Scorecards:** Compares individual rep metrics: leads handled, deals won vs lost, conversion ratios, and closed contract revenue.
- **Streaming High-Performance CSV Export:** Streams filtered lead and financial data directly to the client browser without server memory overhead.

10. ROLE-BASED ACCESS CONTROL (RBAC) & SECURITY

- **3-Tier User Role Hierarchy:** Admin / Mentor (full organization control & deletion), Sales Manager (team pipeline & conversions), and Sales Executive (assigned leads only).
- **Strict Data Privacy Isolation:** Sales executives can only view and modify leads assigned to them or created by them, preventing unauthorized data access.
- **JWT Authentication with Silent Refresh:** Secured with JSON Web Tokens (Access + Refresh); frontend Axios interceptors automatically renew expired tokens without interrupting the user.
- **FastAPI Federated Search Microservice:** Includes an optional FastAPI microservice (:8001) for sub-50ms fuzzy search across leads, contacts, and notes.

Summary: CRM Lite combines rigorous operational pipeline control with state-of-the-art multimodal AI call transcription, an in-app Copilot assistant, atomic conversions, automated follow-up governance, and live KPI dashboards. All features above are fully implemented and running in the production environment.
